

A

Oesophageal  
Adenocarcinoma

Chemoradiotherapy

3 of 6 Cycles ECF  
[Epirubicin, Cisplatin & 5FU]  
Note each cycle is 3 weeks.  
Therefore 3 cycles constitutes ~9 weeks

4 Cycles FLOT  
[5FU, Leucovorin, Oxaliplatin & Taxane]  
Note each cycle involves administering chemotherapy  
then a 2 week break.  
Therefore 4 cycles constitutes ~8 weeks  
Also of note is the aim is to give 4 cycles preop  
And 4 cycles post-op. Some patients will not manage  
the post-op adjuvant course

The view is that FLOT is the new standard although  
there will still be some centers that administer the  
other regimes

Regardless of response

Surgery

Adjuvant chemotherapy  
Eg. Remaining 3 of 6 ECF cycles  
Or Remaining 4 of 8 FLOT
